What is App Suite?

The App Suite is a powerful collection of over 35 advanced trading tools developed by FX Blue, designed to enhance the MetaTrader 4 and 5 experience. This package offers sophisticated charting and risk management calculators to real-time sentiment analysis and trade execution enhancements. Thanks to a collaboration between FX Blue and FTMO, these tools have been customised specifically for FTMO Traders. They are available free of charge for all FTMO-related accounts, including Free Trial, FTMO Challenge, Verification, and the FTMO Account. Whether you're looking to streamline your trading, manage risk more effectively, or gain deeper insights into the market, the App Suite provides a seamless and intuitive solution—all integrated directly within your MetaTrader platform.

Installation & Setup Guide

⚠️ Available for Windows only.

1. Downloading the Installer

You can download the installation file from your Client Area under the Downloads section.

There, you'll find .exe files for both MT4 and MT5 platforms.

- Select the version that matches your trading platform.

- Save the file to your computer and run the installer.

2. Installation Process

Once the installer is launched:
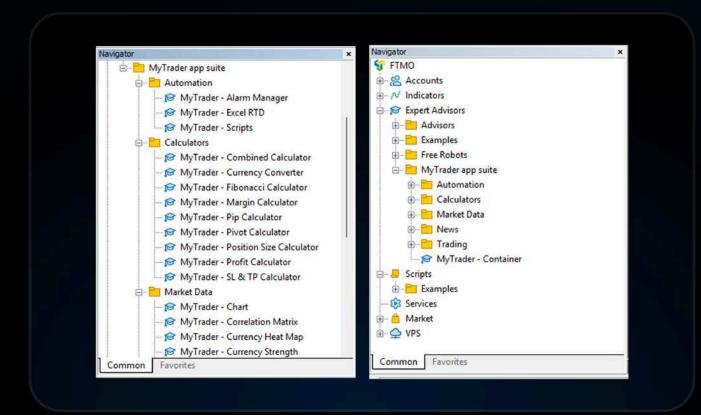

- You'll be prompted to choose the platform where the App Suite should be installed.

- If you have multiple installations of MT4 or MT5 on your PC, select the desired version.

- Click Install to begin the installation.

- You can install the App Suite into all available MT4/MT5 platforms if needed.

Note: If the selected platform is running during installation, you must restart it afterwards.

3. Launching the App Suite

After restarting your platform:

- Open the Navigator panel.

- Locate MyTrader app suite under the Expert Advisors section.

- You'll find multiple tools grouped by category for easier navigation.

4. Initial Setup (Required Settings)

Before using the App Suite, ensure the following options are enabled:

A) One-Click Trading
- Go to Tools > Options > Trade.
- Enable One-Click Trading.
- Confirm the disclaimer when prompted.

B) Expert Advisor Permissions
Navigate to Tools > Options > Expert Advisors and check:
- ✅ Allow automated trading
- ✅ Allow DLL imports
- ✅ Allow WebRequest for listed URL
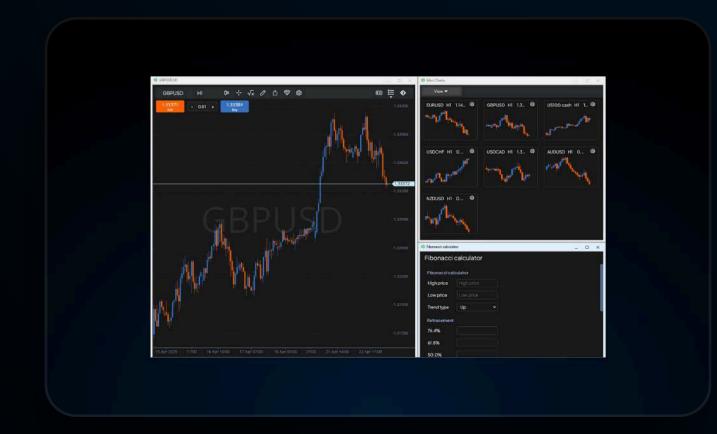

⚠️ If these settings are applied after launching a chart with an app, you may encounter the message:
"Automated trading is disabled in the back-end platform which services the platform."

In this case, restart the platform again.

5. Using the App Suite

Launching a Tool:
- Double-click the selected app in the Navigator or
- Drag it onto the active chart window.
- A settings window will appear – adjust your preferences and click OK to launch the app.

Stopping or Replacing a Tool:
- Double-click the active tool in the chart window again.
- A confirmation message will appear stating the app will be replaced (even if by itself).
- Click Cancel to stop and remove the app from the chart.

You can switch between different tools in the same way:
- Stop the current one, then launch a new one from the Navigator.

Charts & Visualization

Chart

Manage trades directly on the chart with fast and precise tools.

📇 Description

- Set and adjust entry price, stop-loss (SL), and take-profit (TP) by dragging markers on the chart.

- Show or hide selected markets to keep the chart clean and focused on your preferred instruments.

- Instantly modify or close orders using the toolbox icon without opening extra menus.

- Place new trades quickly by clicking on the buy/sell ladders – use market or pending orders.

- Fine-tune SL and TP based on candle values using the order cursor or ladder clicks.

- Use Simple or Full deal ticket mode – Full mode includes advanced features like size calculation based on risk.

- View and manage SL/TP levels directly based on candle high, low, open, or close.

- Customise trades either by editing directly in the chart or using the deal ticket.

- Execute trades instantly using the target icon and confirm with one click.

Container

Create a personalised trading dashboard using flexible layouts and widgets.

📇 Description

- Choose from multiple layout templates to organise your workspace.

- Add widgets by clicking on empty slots; resize them by dragging borders.

- Link widgets to sync market data and timeframes across the entire dashboard.

- Double-click the broker name to quickly edit layout and market selections.

- Replace widgets easily without resetting the whole layout.

- Switch between saved configurations smoothly for efficient navigation.

Mini Charts

Monitor multiple markets simultaneously with compact, mobile-friendly charts – all on one screen.

📇 Description

- View multiple markets in a single, space-saving layout – ideal for mobile or small screens.

- Quickly switch between watchlists to focus on specific assets.

- Change timeframes across one or all charts instantly for flexible analysis.

- Choose your preferred chart type: line, candlestick, or bar.

- Add indicators like Moving Averages, Keltner Channels, or Parabolic SAR to enhance your strategy.

- Save your settings for indicators and chart styles to speed up future analysis.

- Use mini charts to confirm trade entries and exits based on trends and key levels.

- Integrate with tools like Market Scanner or Fibonacci Calculator for deeper insight.

Deal ticket / Trading Action
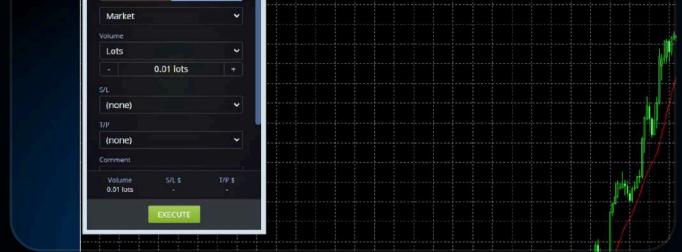

Easily manage trades with two modes, real-time information, and sharing options.

📇 Description

- Place both market and pending orders using separate Buy/Sell buttons or a combined selector.

- Use Simple Mode for quick orders with SL/TP in pips, or Full Mode for advanced settings.

- Full Mode allows automated trade size calculation based on risk and stop-loss.

- See your open position's profit/loss directly on the ticket, in cash and pips.

- Modify or close trades quickly from the ticket without extra steps.

- Save and reuse order templates for faster, consistent execution.

- Share editable charts and scanner setups with others for collaborative analysis.

- Exchange trade ideas and strategies by sending full setup files, not just screenshots.

Calculators

Combined Calculator

Access multiple trading calculators in one tool to manage your trades accurately and efficiently.

Description

- Pip Value Calculator – Calculate pip value based on trade size, market, and deposit currency.

- Margin Calculator – Determine required margin using leverage, trade size, and currency.

- Profit & Loss Calculator – Estimate potential profit/loss in cash and pips from trade details.

- SL & TP Calculator – Set stop-loss and take-profit based on fixed or percentage risk.

- Fibonacci Calculator – Identify retracement and extension levels from price ranges.

- Pivot Point Calculator – Calculate pivot, support, and resistance levels using different methods.

- Currency Converter – Get real-time conversions between currencies based on live rates.

- Risk-Based Volume Calculator – Find trade size that matches your defined risk and stop-loss.

- Integrated Risk Management – Combine results to fine-tune your trade plan.

Currency Converter

Convert currencies in real time using live market prices, with full support for common and rare pairs.

Description

- Instantly convert any amount between currencies using up-to-date exchange rates.

- Perform both direct and triangulated conversions (e.g., CAD → GBP via USD).

- Access a wide range of currencies, including major and minor pairs.

- Rates update with every market tick for maximum accuracy.

- Enter any amount – suitable for both small and large conversions.

- Save frequently used pairs for quicker access in the future.

Fibonacci Calculator

Calculate key Fibonacci retracement and extension levels based on market highs and lows.

Description

- Enter high and low prices to generate retracement (e.g. 61.8%) and extension levels (e.g. 161.8%).

- Choose trend direction to match current market conditions.

- Use levels to plan entries during pullbacks and TPs in trending markets.

- Set SLs based on Fibonacci support/resistance for better risk control.

- Results appear instantly after input for quick decision-making.

- Save settings for consistent use across different charts.

- Combine with other indicators like moving averages or RSI.

- Reload saved setups for faster, more efficient analysis.

Margin Calculator

Quickly calculate the margin needed for any trade based on size, leverage, and currency.

Description

- Select the instrument and enter trade size in lots or notional value.

- Set your leverage ratio to get an accurate margin requirement.

- Choose your account currency for precise cost calculation.

- See results instantly and adjust position size as needed.

- Avoid over-leveraging and maintain healthy margin levels.

- Use margin data to fine-tune your position sizing and risk strategy.

- Integrates easily with other tools like Profit or SL/TP calculators.

Pip Calculator

Find the exact cash value of each pip based on your trade size, market, and deposit currency.

Description

- Enter deposit currency, market, and trade size (in lots or units) to get pip value.

- Supports both lot-based and notional trade sizes for flexibility.

- Displays pip size specific to the market (e.g. 0.0001 for EUR/USD).

- Instantly shows profit/loss per pip in cash – e.g. 2 lots on EUR/USD = $20/pip.

- Customise by account currency for accurate results.

- Use pip value to plan SL/TP and assess risk and reward.

- Optimise position sizing using precise pip values.

- Save settings for quick reuse and efficient future analysis.

Pivot Calculator

Calculate key pivot, support, and resistance levels to guide your trade planning.

- Enter high, low, and close prices to get pivot, S1–S3, and R1–R3 levels.

- Choose from Classic, Woodie's, or Fibonacci formulas based on your strategy.

- Use these levels to identify entry and exit points with greater confidence.

- Adapt inputs to match current market conditions for accurate results.

- Get instant output for quick decision-making.

- Align SL and TP with key support/resistance levels for consistent risk control.

- Combine with indicators like RSI or moving averages to strengthen your strategy.

- Save your preferred formula for faster analysis across markets.

Position Size Calculator

Calculate the exact trade size based on your risk and stop-loss settings.

Description

- Set risk as a cash amount or equity percentage to get the optimal trade volume.

- Enter stop-loss in pips or as a price offset – supports different styles.

- Get accurate lot and unit sizes to match your risk (e.g. $200 risk = 0.40 lots on EUR/USD).

- Select the market to reflect its pip value and volatility in the calculation.

- View results in both lots and notional volume for platform compatibility.

- Align trade size with your risk tolerance for consistent risk management.

- Instant output for quick and confident decisions.

- Save your preferences for faster setup in future trades.

Profit Calculator

Estimate your trade's potential profit or loss in both cash and pips.

Description

- Enter open/close price, volume, and direction to get instant P/L results.

- Set volume in lots or units to match your trading style.

- Choose the market for accurate calculation based on pip value and rates.

- Indicate Buy or Sell to reflect the correct trade scenario.

- Get immediate feedback to adjust your strategy quickly.

- Use results to evaluate reward-risk ratios and plan better entries/exits.

- Save common setups for faster use and consistent analysis.

SL & TP Calculator

Calculate SL and TP levels based on your risk or target in cash or percentage terms.

Description

- Set your desired risk or target as a cash amount or % of equity.

- Enter trade volume (in lots or units) for accurate level calculation.

- Get SL and TP distances in pips or price based on trade size.

- Select the market to match pip value and price behaviour.

- Include trade direction and entry price to get precise SL/TP prices.

- Instantly see if the reward-risk ratio fits your strategy.

- Use this tool to plan exits with confidence and precision.

- Save your preferred setup for faster trade planning next time.

Market Analysis

Correlation Matrix

Description

- Analyse correlations between selected markets on a scale from +100 to –100. +100 = identical movement, –100 = opposite, 0 = no relation.

- Adjust timeframe and number of bars for short- or long-term analysis.

- Spot strong correlations to avoid overexposure or redundant positions.

- Highlight very strong or very weak correlations directly in the matrix.

- Identify uncorrelated markets to build a more balanced trade portfolio.

- Use insights to size positions and manage risk more effectively.

- Integrate with tools like the Market Scanner for deeper strategy planning.

- Save your setup for quick, repeatable analysis.

Currency Heat Map

Description

- Track the biggest currency pair moves over the last 24 hours.

- Filter by a single currency for consistent, focused analysis.

- View all pairs with the selected currency as the base.

- Spot strongest and weakest currencies at a glance.

- Customise the heat map to focus on relevant pairs only.

- Confirm trends or reversals with clear visual insights.

- Optimise your strategy using real-time volatility data.

- Save your settings for fast, repeatable analysis.

Currency Strength

Description

- Instantly identify the strongest and weakest currencies.
- Analyse strength across multiple timeframes for better timing.
- Customise settings to suit your trading style and strategy.
- Use strength data to refine entries, exits, and risk control.
- Combine with other indicators for a more complete view.
- Add to charts easily and set custom alerts for key levels.

Future event scanner

Description

- Scan for upcoming highs, lows, crossovers, and breakouts.
- Detect Golden/Death Crosses, fractal and Bollinger breakouts.
- Spot strong trends or range-bound markets in real time.
- Assess breakouts with recent high/low context.
- Customise scanner settings and focus on chosen markets.
- Switch timeframes for short- or long-term analysis.
- Integrate with the Market Scanner for deeper insights.
- Save your setup for fast, repeatable use.

Market List

Description

- Access full symbol info, including commodities and cryptocurrencies.
- View base currency, pip size, tick size, and contract size.
- Group and filter symbols by asset class, base currency, or underlying asset.
- Check swap rates instantly for both long and short positions.
- See trading limits like lot sizes, leverage, and margin.
- Compare symbols to find the most cost-efficient trades.
- Use detailed data to refine your strategy and manage risk.
- Save your settings for quick, repeatable analysis.

Market Ranges

- Track price movement and volatility across selected markets.
- Choose chart or list view for visual or detailed analysis.
- Select markets and adjust time range from 1h to 48h.
- Spot breakouts, reversals, or range-bound conditions easily.
- Use volatility data to fine-tune SL and TP levels.
- Combine with other tools for a stronger trading strategy.
- Save preferences for a faster, consistent workflow.

Market Scanner

Description

- Scan multiple markets on one clear, customisable page.
- Use over 50 indicators to build your analysis dashboard.
- Set custom alerts for breakouts, RSI signals, or trend shifts.
- Filter results to highlight the most relevant setups.
- Get real-time alerts when conditions are met.
- Refine entries and exits with data-driven insights.
- Save settings for faster, repeatable market scans.
- Combine with other tools for a robust trading strategy.

Sentiment

Description

- See real-time sentiment with % of long vs short positions.
- Choose bar charts or gauges to match your visual preference.
- Focus on one currency for consistent sentiment comparison.
- Sort by strength to spot bullish or bearish extremes.
- Standardise data for easier cross-pair analysis.
- Use sentiment to confirm trends or spot reversals.

Technical Analysis

- Get a clear buy/sell score based on key technical indicators.

- Choose timeframes from seconds to monthly charts.

- Use advanced MAs like Hull and ALMA for smoother trend analysis.

- Spot overbought/oversold zones with RSI, MACD, and more.

- View pivot points using Classic, Fibonacci, or Woodie's methods.

- Customise indicator settings and save your preferences.

- Simplify signals into one actionable long/short score.

- Combine with other tools for deeper market insight.

Price Action News

□ Description

- Get instant alerts on highs, lows, momentum shifts, and sentiment changes.

- Spot breakouts, reversals, and key support/resistance levels fast.

- Click news items to view live charts and market reactions.

- Filter the feed to show only relevant events and markets.

- Use alerts to fine-tune entries, exits, SL and TP levels.

- Combine with other tools for deeper market insight.

- Save your settings for a consistent analysis workflow.

Trading Execution & Order Management

Order batch

Order batch

Action: (none)

Add : [   ]

	Market	Multiplier	
⊙	EURUSD	- 1.0 +	
⊙	GBPUSD	- 1.0 +	
⊙	NZDUSD	- 1.0 +	

Description

• Place multiple orders with one click, adjust volume and direction using multipliers, apply unified SL, and execute all trades simultaneously for precise and efficient market exposure.

Order grid

Order grid

Action: (none)

Entry offset (pips)	- 0.0 +
Orders	- 1 +
Volume change	- 0.00 +
Exit price	☐ Use same s/l and t/p for all orders
Mirror buys and sells	(No mirroring) ▾

Description

• Set up a base order with volume, type, and SL settings.

• Define spacing and number of pending orders in the grid.

• Preview the full grid visually before placing orders.

• Mirror the grid above and below entry for both directions.

• Place the entire grid with a single click.

• Use fixed or dynamic offsets for pending orders.

• Adapt grid setup for breakouts or retracements.

• Apply uniform SL/TP for consistent risk control.

• Simplify complex strategies with fast, automated execution.

Quote board
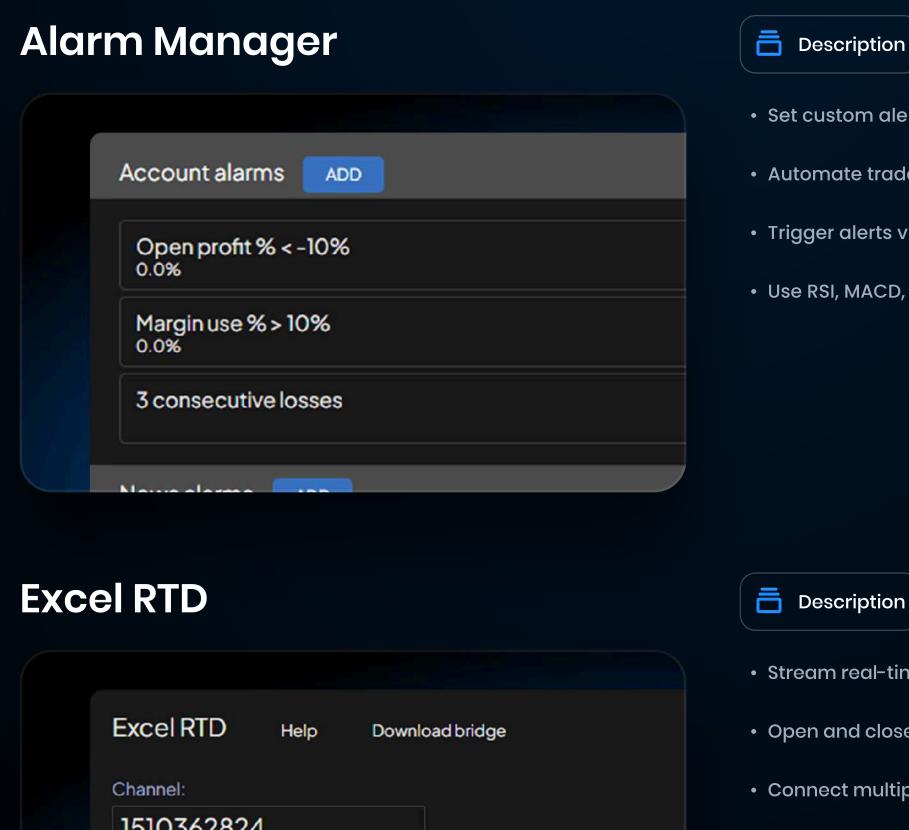

- Monitor prices and open positions in real time.

- Switch between Grid and Deal Ticket modes.

- Customise views, reorder markets, and save watchlists.

- Manage positions and trades directly from the board.

- Filter and sort markets for precise control.

- Use one-click or keyboard trading for faster execution.

- Place and manage orders from the grid or ticket view.

- Save templates for quick, repeatable trade actions.

- Perform bulk actions with multi-select mode.

Trade list

Description

- Switch between Grid and Card modes for trade management.

- Perform bulk actions or manage selected trades individually.

- Set SL and TP directly in the grid for faster edits.

- View totals and sort trades by key metrics.

- Filter trades by conditions like profit, loss, or time.

- Apply actions only to trades matching selected filters.

- Quickly close all winners or losers with one click.

- Group trades by category for organised management.

- Use the same action menu in both modes for consistency.

Automation & Notifications

Alarm Manager

Description

- Set custom alerts for market and account changes in real time.

- Automate trade actions based on price, margin, or indicators.

- Trigger alerts via email, Twitter, or SMS for instant updates.

- Use RSI, MACD, Bollinger Bands and more as action triggers.

Excel RTD

Description

- Stream real-time account, price, and trade data into Excel.

- Open and close trades using simple VBA commands.

- Connect multiple accounts for a full market overview.

- Use the RTD() function—no macros or coding needed.

- Monitor and manage your trading directly from Excel.

Other

Clock

- Switch between time zones like GMT, New York, London, Tokyo, or Sydney.

- Sync with system time or select a fixed session.

- View current time in analog and digital formats, down to the second.

- Quick dropdown menu for instant setup.

- Ideal for timing trades across global sessions.

Economic calendar

Description

- View global economic releases and forecasts in real time.

- Filter by impact, time zone, currency, and date.

- See past and upcoming events in a single timeline.

- Compare actual vs. forecasted values instantly.

- Use color-coded impact markers for quick prioritisation.

Account history

Description

- Track balance, profit, and return over time.

- See best/worst trades, win rates, and market-specific performance.

- Filter by timeframes: day, week, month, year.

- Visualise bias, duration, and winners vs. losers.

- Dive into raw trade stats for precise strategy refinement.
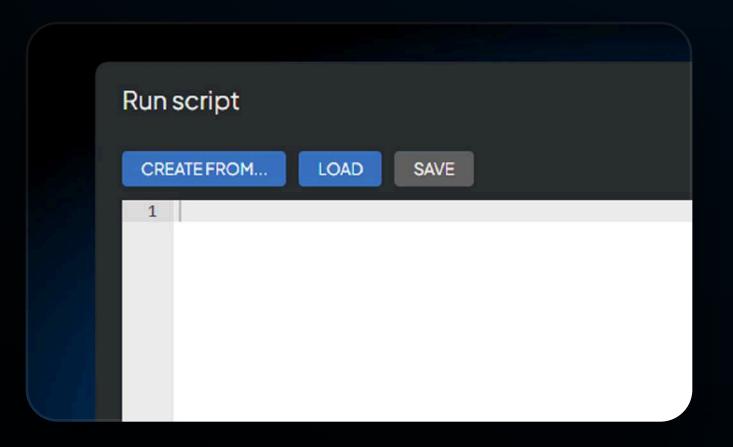

Session Map

Description

- See which sessions (Sydney, Tokyo, London, New York) are open now.
- Spot overlaps for high-liquidity trading opportunities.
- Align sessions with your system time or set a custom zone.
- Use the timeline for exact session open/close tracking.
- Clean, minimalist design for fast, visual planning.

Account Metrics

Description

- Check equity, balance, floating P/L, and open profit %.
- Monitor margin usage and free margin % instantly.
- Visual gauge for quick margin tracking.
- Perfect for staying in control of risk and exposure.

Scripts:

Description

- Create one-click shortcuts for routine tasks.
- No programming needed.
- Streamline your trading workflow effortlessly.
- Integrated directly into your trading platform.
